

The London Grocery Map

The Tesco Grocery 1.0 dataset contains information relating to nutritional statistics, food category breakdowns and demographics of Tesco Clubcard users in Greater London in 2015. In this infographic, we explore how income and regional factors influence food choice.

Key Considerations

The dataset only consists of Tesco Clubcard users

The concentration of Tesco stores is greater in some parts of London

Product Categories are very vague

Most Seasonal Products

+203% Spirits (Dec Peak)

Festive-driven -> stock up

+91% Beer (Summer Peak)

Outdoor demand -> push promos

+79% Wine (Dec Lift)

Upsell in holidays

+60% Tea & Coffee (Winter high)

Declines in summer

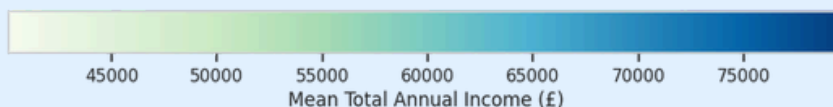

+43% Sauces

Seasonal products are categories that experience a high degree of fluctuation in their sales. They are identified by analyzing how much their sales change relative to their average performance. Seasonal products are those that are most affected by seasonal patterns.

Lower-income boroughs prefer unhealthier products

Higher income boroughs prefer fresh, healthier food

Central and South West London boroughs have the highest income levels, whereas the lowest income boroughs are located in East and North London. Higher-income households show greater consumption of fish and fresh products, while lower-income groups rely more on soft drinks and sweets, highlighting a clear link between income and dietary patterns.

**Cluster 3
Hydrated Home
Cooks**

The Tesco Clubcard holders can be segmented into three distinct segments based on their shopping habits, with convenience-driven snackers preferring ready meals and processed foods, healthy premium buyers preferring fresh food with wine and beer, and home cooks preferring water, cooking ingredients, and spirits with no interest in ready meals.
